WILDGROUNDS TO PLAYGROUNDS
Hyalite-Porcupine-Buffalo Horn Wilderness Study Area and Adjacent Roadless Areas (230,000 acres)
Porcupine Creek Drainage
South Cottonwood Drainage
Ramshorn Peak and Lake Area
West Pine Area
• 1872- Yellowstone Park Created

• 1910- Forest Service Chief Gifford Pinchot advocates for wildlife refuge in Southern Gallatin Range

• 1911- State of Montana established a wildlife refuge in the Buffalo Horn and Porcupine drainages.

• 1925- work begins to purchase inholdings

• 1947- State of Montana purchases eight sections of inholdings in the Buffalo Horn drainage

• 1958- Montana Wilderness Association insists the Regional Forester cancel plans for roadbuilding and logging in Porcupine and Buffalo Horn drainages and he agrees

• 1977- Montana Wilderness Study Areas Act established the Hyalite-Porcupine-Buffalo Horn Wilderness Study Area

• 1983- Lee Metcalf Wilderness Act authorizes land exchanges in the Gallatin Range

• 1993- Gallatin Range Consolidation and Protection Act

• 2019- More than 100 leading scientists endorse 230,000 acres of Wilderness
S. 393 requires protection of the outstanding wilderness character of the wilderness study areas until Congress would move on final disposition, stating:

"the wilderness study areas designated by this Act shall, until Congress determines otherwise, be administered by the Secretary of Agriculture to maintain their presently existing wilderness character and potential for inclusion in the National Wilderness Preservation System."
Wilderness, Wildlife, and Ecological Values of the Hyalite-Porcupine-Buffalo Horn Wilderness Study Area

A Report for the Lee and Donna Metcalf Foundation

By The Craighead Institute

Frank Lance Craighead, PhD

November 2015

The Gallatin Range Is Part of the Most Direct Route Between Greater Yellowstone and the Northern Continental Divide Ecosystems

Walker & Craighead
Conservation biologists: 2,500-5,000 grizzly bears are needed in a single population or metapopulation to ensure long-term viability.

The Core of Any Grizzly Bear Population is the Area Inhabited by Overlapping Breeding Age Males & Females.

Expanding and linking core areas is the central aim of grizzly bear recovery.
Demographic Connectivity Between GYE and the NCDE Isn’t a Sprint by Males Between the Recovery Areas

It’s a Genetic Relay Between “Stepping Stones” of Secure Core Inhabited by Females
“An Unbroken Wilderness”

—“The consolidation of the checkerboard in the Hyalite-Porcupine-Buffalo Horn Wilderness Study Area within the Gallatin Range sets the stage for future consideration of the WSA and surrounding lands for wilderness. It is the largest roadless area in the Greater Yellowstone Ecosystem not currently designated wilderness. In addition to protecting the values mentioned above, it would provide an unbroken wilderness from just south of Bozeman to Yellowstone National Park.”

—Congressional testimony of The Wilderness Society and the Greater Yellowstone Coalition
Greater Yellowstone Coalition
Proposed Wilderness
Submitted to Congress 1994
Potential for “Unbroken Wilderness” Enacted
The Dr. Reed Noss Letter Signed by Over 100 Top Scientists and Conservation Leaders Who Advocate 230,000+ acres of Wilderness in The Gallatin Range

Signers Include:

• Bruce Babbitt, former U.S. Secretary of the Interior, former Governor of Arizona

• Mike Finley, former Superintendent, Yellowstone National Park

• Rick Reese, principal founder and 3-term President, Greater Yellowstone Coalition

• Mike Clark, former Executive Director, Greater Yellowstone Coalition

• Louisa Willcox, former Program Director, Greater Yellowstone Coalition; founder of Grizzly Times

• Bart Koehler, former Associate Program Director, Greater Yellowstone Coalition, former Senior Campaign Director, The Wilderness Society
“Fragmenting the HPBH WSA into smaller pieces of protected habitat would greatly diminish its value for wildlife habitat and the provision of ecosystems services and could nullify its ability to function as a refuge from climate change.”

—— Dr. Frank L. Craighead
Designations in the Gallatin Forest Partnership and the Custer Gallatin Revised Forest Plan
GFP Reply

The GFP claims I wrote that the Forest Service controlled the GFP. In fact, my report states:

The Forest Service did not establish the GFP and has been careful to keep an arm’s length and vice versa, yet it is clear they were delighted as evidenced by the consistent praise for the GFP by the Custer Gallatin National Forest Supervisor Mary Erikson.

GFP Claims the Backcountry Designation in the CGNF Revised Plan Does Not Allow Mining, roads, logging—

“Exceptions to the backcountry area standards in chapter 2 and chapter 3 shall be allowed to provide for reasonable access and mining activities pursuant to the 1872 Mining Law. New access to and development of minerals shall minimize impacts to backcountry areas.” Moreover, temporary roads are allowed in South Cottonwood.

“The backcountry areas are not suitable for timber production. Vegetation management, including timber harvest, is suitable for purposes such as fuels reduction, restoration, or wildlife habitat enhancement.”
Most “Restoration Projects” On the Custer Gallatin National Forest are Commercial Timber Sales Under A Different Name
The GFP claims that new trails are not allowed within the current bounds of the WSA except the extensive new trail loop in West Pine.

The GFPA states: “Immediately following completion of forest plan revision conduct travel analysis for all trails within the P-BH area, designate additional system trails as necessary, and allow no new trail construction following this process.”

No new trails AFTER new ones are added and/or built and possibly add illegal user-created trails to the official system rewarding illegal activities.

This is consistent with the GFP’s citing the illegal motorized and mechanized use within the WSA for the past 35 years as an excuse for not advocating Recommended Wilderness for large areas of the WSA and rewarding the illegal motorized and mechanized use.
“Big Win in the Whitefish Range, Forest Service embraces the Whitefish Partnership proposal in its final Flathead Forest plan.”
“While I did not incorporate the Gallatin Forest Partnership proposal in its entirety, I found the work of the Gallatin Forest Partnership to be the most compelling for this landscape… The plan includes backcountry areas in the Buffalo Horn, South Cottonwood, and West Pine areas, and a Hyalite Recreation Emphasis Area although with some different boundaries than the Gallatin Forest Partnership proposal.”

—Custer Gallatin National Forest Supervisor Mary Erikson

“Overall, the new plan represents a balanced approach to managing the national forest’s 3-million-acre landscape. We commend the forest managers for including many of the collaborative solutions that GYC advocated for to protect our wild backyard for humans and wildlife alike. Included are protections for the Gallatin and Madison mountains that largely mirror the recommendations of the Gallatin Forest Partnership, of which GYC is a founding member. While not perfect, the new plan is a decisive win for public lands in the northern Greater Yellowstone.”

—Greater Yellowstone Coalition

Opening Shot of GYC’s Video on the Gallatin Forest Partnership Agreement—the Denial of Recreational Impact on Native Wildlife
Desire—

“Mountain bikers are out to challenge the resource. It’s about how fast you can go and how many miles you can put on. Snowmobilers are after the highest mark on the hillside, the highest speed across the meadow.”

—Arnold “Smoke” Elser

Denial—

While all human use has impacts on wildlife, Numerous Research Studies Show ATVs and Mountain Biking Have the Most Displacement Impact on Elk including Forest Service research (Wisdom, et al.)

The risk of a serious encounter with a grizzly bear while mountain biking is approximately 14X that of hiking.
Mountain Biking in Grizzly Bear Habitat is a High-Risk Activity Due to Silent Travel At High Speeds Around Blind Corners
